Picksy^{Pro}

Picksy^{Pro}, is the world's first dark branch with unmanned aerial and ground vehicle package and battery transfer infrastructure.

- With Picksy^{Pro}, up to 500 packages can be stocked in an area of 5.4 m^2.
- 24/7 active delivery infrastructure thanks to package and battery transfer technology with Picksy^{Air} and Picksy^{Street}.
- A human-independent cargo branch experience is provided with payment and adhesive label options.

Advantages

You can choose the hardware you want in Picksy^{Pro} according to your needs.

Volume Measurement
Desi information can be obtained by measuring the dimensions and weight of delivered packages

Payment Infrastructure
Unmanned cargo branch concept with payment option integrated into the system

Low cost
Low maintenance cost with remote instant technical monitoring

Autonomous Package Transfer
Package transfer with autonomous vehicles thanks to specially designed robotic infrastructure

Efficient Package Stocking
Stocks up to 8 times more packages than traditional shipping vending machines

Customer happiness
Easy to use, fast and seamless user experience

How does it work?

Picksy^{Pro}'s hopper opens and the courier places the package.

The end user receives a notification and the delivery code for the package they will receive.

The end user enters the delivery code on the Picksy^{Pro} screen or scans the QR code.

The robotic system inside Picksy^{Pro} picks up the package and delivers it within seconds.

Up to 5.2 m

Dimensions
